Welcome to the Purdue School of Nursing where we generate extraordinary learning experiences, innovative research, and impactful engagement. Our School just celebrated the 50th anniversary of contributing top quality nurses to the profession!

Cutting edge curricula and outstanding learning experiences are integrated into all program offerings. Our programs embrace the directives from recent seminal publications from the Carnegie Foundation and the Institute of Medicine.

Students at Purdue are actively engaged in making an impact on the patients, families, and communities we serve. Intra and inter professional service/learning experiences such as the annual Military Stand-Down event for Veterans and the Child Wellness Day for the children of Purdue graduate students are influencing lives. As well, our relationship with Purdue Extension is providing extension educators with essential information to promote health and wellness across the state and nation.

The nurse-managed clinic model instituted in the Federally Qualified Health Center affiliated with Purdue Nursing meets primary healthcare needs in two medically underserved rural counties near the university. Recently recognized as a level 2 Patient Centered Medical Home, the clinics had over 12,000 patient visits in 2013. Students in the undergraduate and master's programs participate in learning experiences in these rural clinics. As well, the clinics provide an opportunity for students in the Doctor of Nursing Practice program to implement projects to improve quality of care.

Research in the School of Nursing centers on three major themes: Healthcare Systems and Quality Improvement, Health Promotion, and Chronic Disease Management. Please visit our faculty webpages to learn more about the innovative work being accomplished by our talented faculty.

At Purdue nursing, we infuse the best of systems engineering into our nursing programs. Our graduates learn how to implement the quality improvement processes so essential in today's practice environment. Service/learning activities in the undergraduate programs prepare new nurses to step immediately into quality improvement teams in the workplace. Graduate students learn to apply systems engineering principles in their practice inquiry projects.

Purdue Nurses are well prepared to be leaders in the profession. It will be amazing to see what our next 50 years of graduates will accomplish!

Boiler up and Hail Purdue!
